

Motorist Left Turn In Front Of Bicyclist

Frequency: 36 cases; 1.2% of all crashes
Severity: 9% resulted in serious or fatal injuries

Description: Both parties were traveling in the same direction and the motorist turned left in front of the bicyclist.

Summary: In comparison to all crashes, this crash was more likely to involve young adult (age 20 to 24) bicyclists and take place on multilane roads (4, 5, and 6+ lanes).

Seventy five percent of these crashes took place at an intersection.

Almost 4 out of 5 bicyclists were riding facing traffic either in the roadway or in the “off road” position.

This crash tended to be less serious than the average. There were no fatalities.
